SAFETY PRECAUTIONS

IMPORTANT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety-related characteristics. These parts are identified by Δ in the Schematic Diagram and Exploded View.

It is essential that these special safety parts should be replaced with the same components as recommended in this manual to prevent Shock, Fire, or other Hazards.

Do not modify the original design without permission of manufacturer.

General Guidance

An **isolation Transformer should always be used** during the servicing of a receiver whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks.

It will also protect the receiver and its components from being damaged by accidental shorts of the circuitry that may be inadvertently introduced during the service operation.

If any fuse (or Fusible Resistor) in this TV receiver is blown, replace it with the specified.

When replacing a high wattage resistor (Oxide Metal Film Resistor, over 1 W), keep the resistor 10 mm away from PCB.

Keep wires away from high voltage or high temperature parts.

Before returning the receiver to the customer,

always perform an **AC leakage current check** on the exposed metallic parts of the cabinet, such as antennas, terminals, etc., to be sure the set is safe to operate without damage of electrical shock.

Leakage Current Cold Check(Antenna Cold Check)

With the instrument AC plug removed from AC source, connect an electrical jumper across the two AC plug prongs. Place the AC switch in the on position, connect one lead of ohm-meter to the AC plug prongs tied together and touch other ohm-meter lead in turn to each exposed metallic parts such as antenna terminals, phone jacks, etc.

If the exposed metallic part has a return path to the chassis, the measured resistance should be between $1\text{ M}\Omega$ and $5.2\text{ M}\Omega$.

When the exposed metal has no return path to the chassis the reading must be infinite.

An other abnormality exists that must be corrected before the receiver is returned to the customer.

Leakage Current Hot Check (See below Figure)

Plug the AC cord directly into the AC outlet.

Do not use a line Isolation Transformer during this check.

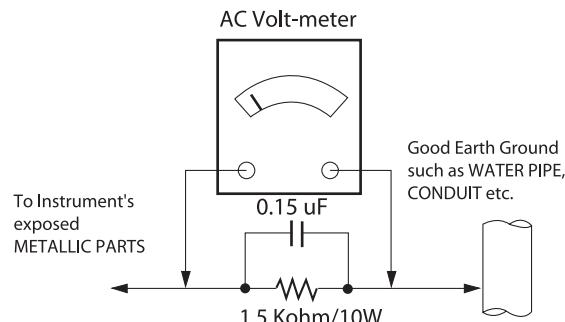

Connect 1.5 K / 10 watt resistor in parallel with a 0.15 uF capacitor between a known good earth ground (Water Pipe, Conduit, etc.) and the exposed metallic parts.

Measure the AC voltage across the resistor using AC voltmeter with 1000 ohms/volt or more sensitivity.

Reverse plug the AC cord into the AC outlet and repeat AC voltage measurements for each exposed metallic part. Any voltage measured must not exceed 0.75 volt RMS which corresponds to 0.5 mA.

In case any measurement is out of the limits specified, there is possibility of shock hazard and the set must be checked and repaired before it is returned to the customer.

Leakage Current Hot Check circuit

When 25A is impressed between Earth and 2nd Ground for 1 second, Resistance must be less than $0.1\ \Omega$

*Base on Adjustment standard

SERVICING PRECAUTIONS

CAUTION: Before servicing receivers covered by this service manual and its supplements and addenda, read and follow the *SAFETY PRECAUTIONS* on page 3 of this publication.

NOTE: If unforeseen circumstances create conflict between the following servicing precautions and any of the safety precautions on page 3 of this publication, always follow the safety precautions. Remember: Safety First.

General Servicing Precautions

1. Always unplug the receiver AC power cord from the AC power source before:
 - a. Removing or reinstalling any component, circuit board module or any other receiver assembly.
 - b. Disconnecting or reconnecting any receiver electrical plug or other electrical connection.
 - c. Connecting a test substitute in parallel with an electrolytic capacitor in the receiver.
- CAUTION:** A wrong part substitution or incorrect polarity installation of electrolytic capacitors may result in an explosion hazard.
2. Test high voltage only by measuring it with an appropriate high voltage meter or other voltage measuring device (DVM, FETVOM, etc) equipped with a suitable high voltage probe. Do not test high voltage by "drawing an arc".
3. Do not spray chemicals on or near this receiver or any of its assemblies.
4. Unless specified otherwise in this service manual, clean electrical contacts only by applying the following mixture to the contacts with a pipe cleaner, cotton-tipped stick or comparable non-abrasive applicator; 10 % (by volume) Acetone and 90 % (by volume) isopropyl alcohol (90 % - 99 % strength)
CAUTION: This is a flammable mixture.
Unless specified otherwise in this service manual, lubrication of contacts is not required.
5. Do not defeat any plug/socket B+ voltage interlocks with which receivers covered by this service manual might be equipped.
6. Do not apply AC power to this instrument and/or any of its electrical assemblies unless all solid-state device heat sinks are correctly installed.
7. Always connect the test receiver ground lead to the receiver chassis ground before connecting the test receiver positive lead.
Always remove the test receiver ground lead last.
8. Use with this receiver only the test fixtures specified in this service manual.
CAUTION: Do not connect the test fixture ground strap to any heat sink in this receiver.

Electrostatically Sensitive (ES) Devices

Some semiconductor (solid-state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed to prevent potential shock reasons prior to applying power to the unit under test.

2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static type solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.
CAUTION: Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.
8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device.)

General Soldering Guidelines

1. Use a grounded-tip, low-wattage soldering iron and appropriate tip size and shape that will maintain tip temperature within the range of 500 °F to 600 °F.
2. Use an appropriate gauge of RMA resin-core solder composed of 60 parts tin/40 parts lead.
3. Keep the soldering iron tip clean and well tinned.
4. Thoroughly clean the surfaces to be soldered. Use a small wire-bristle (0.5 inch, or 1.25 cm) brush with a metal handle.
Do not use freon-propelled spray-on cleaners.
5. Use the following unsoldering technique
 - a. Allow the soldering iron tip to reach normal temperature. (500 °F to 600 °F)
 - b. Heat the component lead until the solder melts.
 - c. Quickly draw the melted solder with an anti-static, suction-type solder removal device or with solder braid.
CAUTION: Work quickly to avoid overheating the circuit board printed foil.
6. Use the following soldering technique.
 - a. Allow the soldering iron tip to reach a normal temperature (500 °F to 600 °F)
 - b. First, hold the soldering iron tip and solder the strand against the component lead until the solder melts.
 - c. Quickly move the soldering iron tip to the junction of the component lead and the printed circuit foil, and hold it there only until the solder flows onto and around both the component lead and the foil.
CAUTION: Work quickly to avoid overheating the circuit board printed foil.
 - d. Closely inspect the solder area and remove any excess or splashed solder with a small wire-bristle brush.

IC Remove/Replacement

Some chassis circuit boards have slotted holes (oblong) through which the IC leads are inserted and then bent flat against the circuit foil. When holes are the slotted type, the following technique should be used to remove and replace the IC. When working with boards using the familiar round hole, use the standard technique as outlined in paragraphs 5 and 6 above.

Removal

1. Desolder and straighten each IC lead in one operation by gently prying up on the lead with the soldering iron tip as the solder melts.
2. Draw away the melted solder with an anti-static suction-type solder removal device (or with solder braid) before removing the IC.

Replacement

1. Carefully insert the replacement IC in the circuit board.
2. Carefully bend each IC lead against the circuit foil pad and solder it.
3. Clean the soldered areas with a small wire-bristle brush. (It is not necessary to reapply acrylic coating to the areas).

"Small-Signal" Discrete Transistor

Removal/Replacement

1. Remove the defective transistor by clipping its leads as close as possible to the component body.
2. Bend into a "U" shape the end of each of three leads remaining on the circuit board.
3. Bend into a "U" shape the replacement transistor leads.
4. Connect the replacement transistor leads to the corresponding leads extending from the circuit board and crimp the "U" with long nose pliers to insure metal to metal contact then solder each connection.

Power Output, Transistor Device

Removal/Replacement

1. Heat and remove all solder from around the transistor leads.
2. Remove the heat sink mounting screw (if so equipped).
3. Carefully remove the transistor from the heat sink of the circuit board.
4. Insert new transistor in the circuit board.
5. Solder each transistor lead, and clip off excess lead.
6. Replace heat sink.

Diode Removal/Replacement

1. Remove defective diode by clipping its leads as close as possible to diode body.
2. Bend the two remaining leads perpendicular y to the circuit board.
3. Observing diode polarity, wrap each lead of the new diode around the corresponding lead on the circuit board.
4. Securely crimp each connection and solder it.
5. Inspect (on the circuit board copper side) the solder joints of the two "original" leads. If they are not shiny, reheat them and if necessary, apply additional solder.

Fuse and Conventional Resistor

Removal/Replacement

1. Clip each fuse or resistor lead at top of the circuit board hollow stake.
2. Securely crimp the leads of replacement component around notch at stake top.

3. Solder the connections.

CAUTION: Maintain original spacing between the replaced component and adjacent components and the circuit board to prevent excessive component temperatures.

Circuit Board Foil Repair

Excessive heat applied to the copper foil of any printed circuit board will weaken the adhesive that bonds the foil to the circuit board causing the foil to separate from or "lift-off" the board. The following guidelines and procedures should be followed whenever this condition is encountered.

At IC Connections

To repair a defective copper pattern at IC connections use the following procedure to install a jumper wire on the copper pattern side of the circuit board. (Use this technique only on IC connections).

1. Carefully remove the damaged copper pattern with a sharp knife. (Remove only as much copper as absolutely necessary).
2. carefully scratch away the solder resist and acrylic coating (if used) from the end of the remaining copper pattern.
3. Bend a small "U" in one end of a small gauge jumper wire and carefully crimp it around the IC pin. Solder the IC connection.
4. Route the jumper wire along the path of the out-away copper pattern and let it overlap the previously scraped end of the good copper pattern. Solder the overlapped area and clip off any excess jumper wire.

At Other Connections

Use the following technique to repair the defective copper pattern at connections other than IC Pins. This technique involves the installation of a jumper wire on the component side of the circuit board.

1. Remove the defective copper pattern with a sharp knife. Remove at least 1/4 inch of copper, to ensure that a hazardous condition will not exist if the jumper wire opens.
2. Trace along the copper pattern from both sides of the pattern break and locate the nearest component that is directly connected to the affected copper pattern.
3. Connect insulated 20-gauge jumper wire from the lead of the nearest component on one side of the pattern break to the lead of the nearest component on the other side. Carefully crimp and solder the connections.

CAUTION: Be sure the insulated jumper wire is dressed so the it does not touch components or sharp edges.

SPECIFICATION

NOTE : Specifications and others are subject to change without notice for improvement.

1. Application range

This specification is applied to the LED TV used LD3BF chassis.

2. Requirement for Test

Each part is tested as below without special appointment.

- 1) Temperature: $25^{\circ}\text{C} \pm 5^{\circ}\text{C}$ ($77^{\circ}\text{F} \pm 9^{\circ}\text{F}$), CST: $40^{\circ}\text{C} \pm 5^{\circ}\text{C}$
- 2) Relative Humidity: $65\% \pm 10\%$
- 3) Power Voltage
 - : Standard input voltage (AC 100-240 V~, 50/60 Hz)
 - * Standard Voltage of each products is marked by models.
- 4) Specification and performance of each parts are followed each drawing and specification by part number in accordance with BOM.
- 5) The receiver must be operated for about 20 minutes prior to the adjustment.

4. Model General Specification

No.	Item	Specification	Remarks
1	Market	EU(PAL Market-37Countries)	DTV (MPEG2/4, DVB-T) : 37 countries (Albania/Austria/Belarus/Belgium/Bosnia/Bulgaria/Croatia/Czech/Denmark/Estonia/Finland/France/Germany/Greece/Hungary/Ireland/Italy/Kazakhstan/Latvia/Lithuania/Luxembourg/Morocco/Netherlands/Norway/Poland/Portugal/Romania/Russia/Serbia/Slovakia/Slovenia/Spain/Sweden/Switzerland/Turkey/UK/Ukraine) DTV (MPEG2/4, DVB-C): 37 countries (Albania/Austria/Belarus/Belgium/Bosnia/Bulgaria/Croatia/Czech/Denmark/Estonia/Finland/France/Germany/Greece/Hungary/Ireland/Italy/Kazakhstan/Latvia/Lithuania/Luxembourg/Morocco/Netherlands/Norway/Poland/Portugal/Romania/Russia/Serbia/Slovakia/Slovenia/Spain/Sweden/Switzerland/Turkey/UK/Ukraine)

ADJUSTMENT INSTRUCTION

1. Application Range

This specification sheet is applied to all of the LED TV with LD3BF chassis.

2. Designation

- (1) Because this is not a hot chassis, it is not necessary to use an isolation transformer. However, the use of isolation transformer will help protect test instrument.
- (2) Adjustment must be done in the correct order.
- (3) The adjustment must be performed in the circumstance of $25^{\circ}\text{C} \pm 5^{\circ}\text{C}$ of temperature and $65\% \pm 10\%$ of relative humidity if there is no specific designation.
- (4) The input voltage of the receiver must keep AC 100-240 V~, 50/60 Hz.
- (5) The receiver must be operated for about 5 minutes prior to the adjustment when module is in the circumstance of over 15.

In case of keeping module is in the circumstance of 0°C , it should be placed in the circumstance of above 15°C for 2 hours.

In case of keeping module is in the circumstance of below -20°C , it should be placed in the circumstance of above 15°C for 3 hours.

[Caution]

When still image is displayed for a period of 20 minutes or longer (Especially where W/B scale is strong. Digital pattern 13ch and/or Cross hatch pattern 09ch), there can some afterimage in the black level area.

3. Automatic Adjustment

3.1. MAC address D/L , CI+ key D/L, Widevine key D/L, ESN D/L

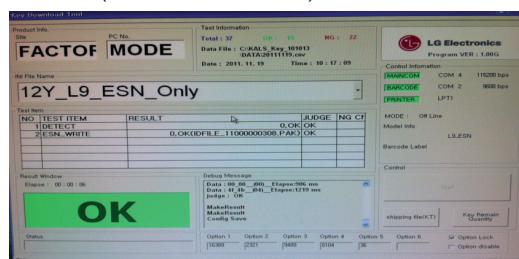

Connect: USB port

Communication Prot connection

- Com 1,2,3,4 and 115200(Baudrate)

Mode check: Online Only

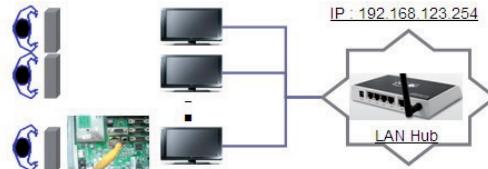

- Check the test process: DETECT -> MAC -> CI -> Widevine -> ESN
- Play: Press Enter key
- Result: Ready, Test, OK or NG
- Printer Out (MAC Address Label)

3.2. LAN Inspection

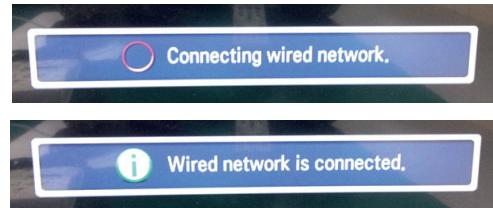

3.2.1. Equipment & Condition

- Each other connection to LAN Port of IP Hub and Jig

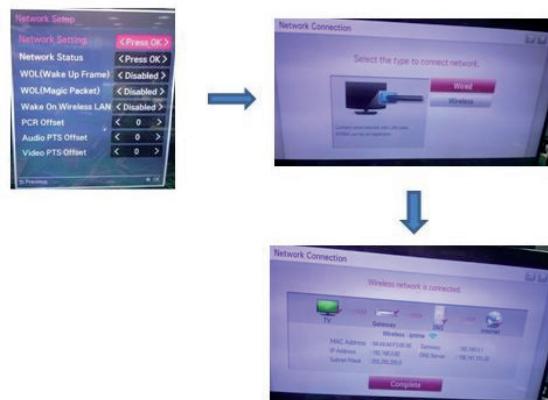

3.2.2. LAN inspection solution

- LAN Port connection with PCB
- Setting automatic IP

- If you want manual connection, In start->menu->Network Setup->Network Setting->Press OK
Press Wired or Wireless connection key, then Network will be connected.

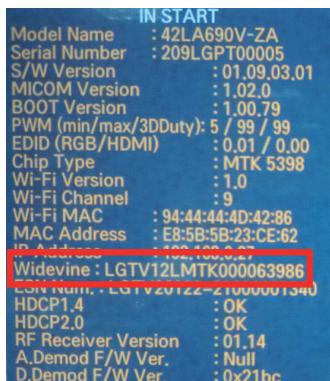

- Setting state confirmation

- If automatic setting is finished, you confirm IP and MAC Address at 'in start' menu mode.

IN START	
Model Name	: 42LA690V-ZA
Serial Number	: 209LGPT00005
S/W Version	: 01.09.03.01
MICOM Version	: 1.02.0
BOOT Version	: 1.00.79
PWM (min/max/3DDuty):	5 / 99 / 99
EDID (RGB/HDMI)	: 0.01 / 0.00
Chip Type	: MTK 5398
Wi-Fi Version	: 1.0
Wi-Fi Channel	: 9
Wi-Fi MAC	: 94:44:44:4D:42:86
MAC Address	: F9:5D:69:22:E6:62
IP Address	: 192.168.0.27
ESN Num.	: LGTV20122=21000001340
HDCP1.4	: OK
HDCP2.0	: OK
RF Receiver Version	: 01.14
A.Demod F/W Ver.	: Null
D.Demod F/W Ver.	: 0x21bc

3.2.3. WIDEVINE key Inspection

- Confirm key input data at the "IN START" MENU Mode.

3.3. LAN PORT INSPECTION(PING TEST)

Connect SET → LAN port == PC → LAN Port

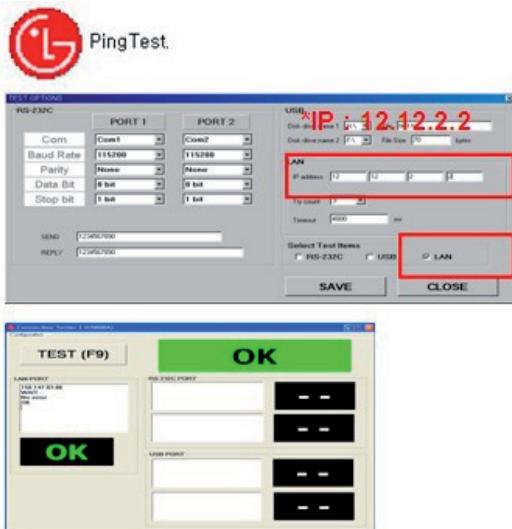

3.3.1. Equipment setting

- (1) Play the LAN Port Test PROGRAM.
- (2) Input IP set up for an inspection to Test Program.
*IP Number : 12.12.2.2

3.3.2. LAN PORT inspection(PING TEST)

- (1) Play the LAN Port Test Program.
- (2) Connect each other LAN Port Jack.
- (3) Play Test (F9) button and confirm OK Message.
- (4) Remove LAN cable.

3.4. Model name & Serial number Download

3.4.1. Model name & Serial number D/L

• Press "Power on" key of service remote control.

(Baud rate : 115200 bps)

• Connect RS-232C Signal to USB Cable to USB.

• Write Serial number by use USB port.

• Must check the serial number at Instart menu.

3.4.2. Method & notice

(1) Serial number D/L is using of scan equipment.

(2) Setting of scan equipment operated by Manufacturing Technology Group.

(3) Serial number D/L must be conformed when it is produced in production line, because serial number D/L is mandatory by D-book 4.0.

* Manual Download (Model Name and Serial Number)

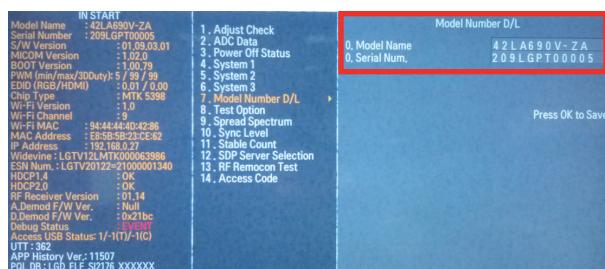

If the TV set is downloaded by OTA or service man, sometimes model name or serial number is initialized.(Not always)

It is impossible to download by bar code scan, so It need Manual download.

1) Press the "Instart" key of Adjustment remote control.

2) Go to the menu "7.Model Number D/L" like below photo.

3) Input the Factory model name(ex 42LA690V-ZA) or Serial number like photo.

4) Check the model name Instart menu. → Factory name displayed. (ex 42LA690V-ZA)

5) Check the Diagnostics.(DTV country only) → Buyer model displayed. (ex 42LA690V-ZA)

3.5. CI+ Key checking method

Check whether the key was downloaded or not at 'In Start' menu. (Refer to below).

=> Check the Download to CI+ Key value in LGset.

3.5.1. Check the method of CI+ Key value

- (1) Check the method on Instart menu
- (2) Check the method of RS232C Command

1) Into the main ass'y mode(RS232: aa 00 00)

CMD 1	CMD 2	Data 0	
A	A	0	0

2) Check the key download for transmitted command
(RS232: ci 00 10)

CMD 1	CMD 2	Data 0	
C	I	1	0

3) Result value

- Normally status for download : OKx
- Abnormally status for download : NGx

3.5.2. Check the method of CI+ key value(RS232)

1) Into the main ass'y mode(RS232: aa 00 00)

CMD 1	CMD 2	Data 0	
A	A	0	0

2) Check the mothod of CI+ key by command
(RS232: ci 00 20)

CMD 1	CMD 2	Data 0	
C	I	2	0

3) Result value

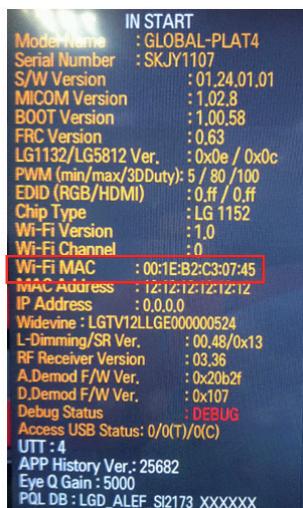

i 01 OK 1d1852d21c1ed5dcx
 |
 | CI+ Key Value

3.6. WIFI MAC ADDRESS CHECK

- (1) Using RS232 Command

	H-freq(kHz)	V-freq.(Hz)
Transmission	[A][I][][Set ID][][20][Cr]	[O][K][X] or [NG]

- (2) Check the menu on in-start

4. Manual Adjustment

* ADC adjustment is not needed because of OTP(Auto ADC adjustment)

4.1. EDID DATA

4.2. White Balance Adjustment

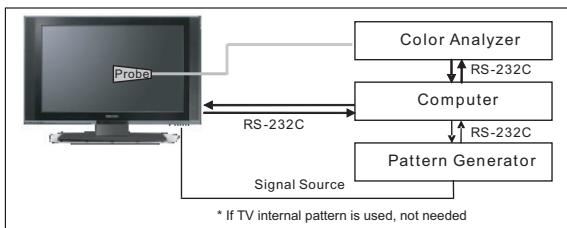

4.2.1. Overview

- W/B adj. Objective & How-it-works
 - (1) Objective: To reduce each Panel's W/B deviation
 - (2) How-it-works : When R/G/B gain in the OSD is at 192, it means the panel is at its Full Dynamic Range. In order to prevent saturation of Full Dynamic range and data, one of R/G/B is fixed at 192, and the other two is lowered to find the desired value.
 - (3) Adjustment condition : normal temperature
 - 1) Surrounding Temperature : $25^{\circ}\text{C} \pm 5^{\circ}\text{C}$
 - 2) Surrounding Humidity : 20 % ~ 80 %

4.2.2. Equipment

- (1) Color Analyzer: CA-210 (LED Module : CH 14)
- (2) Adjustment Computer(During auto adj., RS-232C protocol is needed)
- (3) Adjustment Remote control
- (4) Video Signal Generator MSPG-925F 720p/216-Gray
(Model: 217, Pattern: 49)
→ Only when internal pattern is not available
- Color Analyzer Matrix should be calibrated using CS-100.

4.2.3. Equipment connection MAP

4.2.4. Adj. Command (Protocol)

<Command Format>

START 6E | A | 50 | A | LEN | A | 03 | A | CMD | A | 00 | A | VAL | A | CS | STOP |

- LEN: Number of Data Byte to be sent
- CMD: Command
- VAL: FOS Data value
- CS: Checksum of sent data
- A: Acknowledge

Ex) [Send: JA_00_DD] / [Ack: A_00_okDDX]

- RS-232C Command used during auto-adjustment.

RS-232C COMMAND [CMD ID DATA]			Explantion
wb	00	00	Begin White Balance adjustment
wb	00	10	Gain adjustment(internal white pattern)
wb	00	1f	Gain adjustment completed
wb	00	20	Offset adjustment(internal white pattern)
wb	00	2f	Offset adjustment completed
wb	00	ff	End White Balance adjustment (internal pattern disappears)

Ex) wb 00 00 → Begin white balance auto-adj.

wb 00 10 → Gain adj.

ja 00 ff → Adj. data

jb 00 c0

...

...

wb 00 1f → Gain adj. completed

*(wb 00 20(Start), wb 00 2f(end)) → Off-set adj.

wb 00 ff → End white balance auto-adj.

▪ Adj. Map

	Adj. item	Command (lower caseASCII)		Data Range (Hex.)		Default (Decimal)
		CMD1	CMD2	MIN	MAX	
Cool	R Gain	j	g	00	C0	
	G Gain	j	h	00	C0	
	B Gain	j	i	00	C0	
	R Cut					
	G Cut					
	B Cut					
Medium	R Gain	j	a	00	C0	
	G Gain	j	b	00	C0	
	B Gain	j	c	00	C0	
	R Cut					
	G Cut					
	B Cut					
Warm	R Gain	j	d	00	C0	
	G Gain	j	e	00	C0	
	B Gain	j	f	00	C0	
	R Cut					
	G Cut					
	B Cut					

4.2.5. Adj. method

(1) Auto adj. method

- Set TV in adj. mode using P-ONLY key(or POWER ON key).
- Zero calibrate probe then place it on the center of the Display.
- Connect Cable.(RS-232C to USB)
- Select mode in adj. Program and begin adj.
- When adj. is complete (OK Sign), check adj. status pre mode. (Warm, Medium, Cool)
- Remove probe and RS-232C cable to complete adj.
- W/B Adj. must begin as start command "wb 00 00" , and finish as end command "wb 00 ff", and Adj. offset if need.

(2) Manual adjustment. method

- Set TV in Adj. mode using P-Only key.
- Zero Calibrate the probe of Color Analyzer, then place it on the center of LCD module within 10 cm of the surface.
- Press ADJ key → EZ adjust using adj. R/C → 7. White-Balance then press the cursor to the right(key ▶).
(When right key(▶) is pressed 204 Gray internal pattern will be displayed)
- One of R Gain / G Gain / B Gain should be fixed at 192, and the rest will be lowered to meet the desired value.
- Adjustment is performed in COOL, MEDIUM, WARM 3 modes of color temperature.
- If internal pattern is not available, use RF input. In EZ Adj. menu 7.White Balance, you can select one of 2 Test-pattern: ON, OFF. Default is inner(ON). By selecting OFF, you can adjust using RF signal in 204 Gray pattern.

- Adjustment condition and cautionary items
 - 1) Lighting condition in surrounding area

Surrounding lighting should be lower 10 lux. Try to isolate adj. area into dark surrounding.
 - 2) Probe location

: Color Analyzer(CA-210) probe should be within 10 cm and perpendicular of the module surface (80° ~ 100°)

4.2.6. Reference (White balance Adj. coordinate and color temperature)

- Luminance : 204 Gray
- Standard color coordinate and temperature using CS-1000 (over 26 inch)

Mode	Coordinate		Temp	Δuv
	x	y		
Cool	0.269	0.273	13,000 K	0.0000
Medium	0.285	0.293	9,300 K	0.0000
Warm	0.313	0.329	6,500 K	0.0000

- Standard color coordinate and temperature using CA-210(CH 14) (1) LGD

Mode	Coordinate		Temp	Δuv
	x	y		
Cool	0.269 ± 0.002	0.273 ± 0.002	13,000 K	0.0000
Medium	0.285 ± 0.002	0.293 ± 0.002	9,300 K	0.0000
Warm	0.313 ± 0.002	0.329 ± 0.002	6,500 K	0.0000

(2) O/S Module(AUO, CMI, Sharp, IPS...)

Mode	Coordinate		Temp	Δuv
	x	y		
Cool	0.271 ± 0.002	0.276 ± 0.002	13,000 K	0.0000
Medium	0.287 ± 0.002	0.296 ± 0.002	9,300 K	0.0000
Warm	0.315 ± 0.002	0.332 ± 0.002	6,500 K	0.0000

4.2.7. LED White balance table

* Normal Line

GP4	Aging time (Min)	Cool		Medium		Warm

9	Over 150	263	266	279	286	303	316

4.3. Tool Option selection

- Method : Press "ADJ" key on the Adjustment remote control, then select Tool option.

	42LP860H-ZA	47LP860H-ZA	55LP860H-ZA
Tool Option 1	38	39	41
Tool Option 2	41350	41350	41350
Tool Option 3	565	565	565
Tool Option 4	12909	12909	12909
Tool Option 5	4315	4315	4315
Tool Option 6	1305	1305	1305
Tool Option 7	5807	5807	5807
Commercial Tool Option	60950	60950	60950
Country Group	04	04	04

- Method: Press Adj. key on the Adj. R/C, then select Area option.

	EU,EK	EN	RU	UAE
Area Code	32898	33155	33154	12418
Nordic UI	0	1	0	0
Use HW Option	1	1	1	1
T2	0	0	0	0
C2	0	0	0	0
Satellite	0	0	0	0
MHP	0	0	0	0
HBBTV	2	2	2	2
Isolator	0	1	1	0
EU_Country	Non-Nordic	Non-Nordic	Non-Nordic	Non-Nordic
Arabic	0	0	0	0
Wi-Fi Frequency	8	8	8	3

4.4. Wi-Fi Test

Step 1) Turn on TV

Step 2) Select Network Connection option in Network Menu.
In start menu -> Menu -> Network Setup (Network Setting>Press OK)

Step 3) Select Start Connection button in Network Connection.

Step 4) If the system finds any AP like below PIC, it is working well.

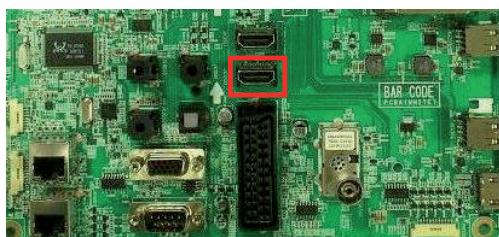

4.5. HDMI ARC Function Inspection

4.5.1. Test equipment

- Optic Receiver Speaker
- MSHG-600 (SW: 1220 ↑)
- HDMI Cable (for 1.4 version)

4.5.2. Test method

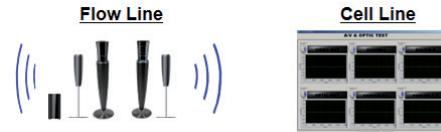

(1) Insert the HDMI Cable to the HDMI ARC port from the master equipment (HDMI1)

(2) Check the sound from the TV Set

(3) Check the Sound from the Speaker or using AV & Optic TEST program (It's connected to MSHG-600)

* Remark: Inspect in Power Only Mode and check SW version in a master equipment

4.6. Local Dimming Function Check

Step 1) Turn on TV.

Step 2) Press "TILT" key on the Adj. R/C.

Step 3) At the Local Dimming mode, module Edge Backlight moving right to left Back light of IOP module moving.

Step 4) Confirm the Local Dimming mode.

Step 5) Press "exit" key.

Local Dimming Demo
(Edge LED Model)

4.7. Magic Motion Remote control test

(1) Equipment : RF Remote control for test, IR-KEN-Code Remote control for test

(2) You must confirm the battery power of RF-Remote control before test.(recommend that change the battery per every lot)

(3) Sequence (test)

1) if you select the "Start(Wheel)" key on the Adjustment remote control, you can pairing with the TV SET.

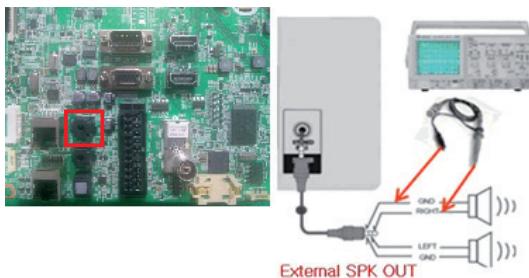

2) You can check the cursor on the TV Screen, when select the "Wheel" key on the Adjustment remote control.

3) You must remove the pairing with the TV Set by select "Mute" key on the Adjustment remote control.

5. Check Commercial features

Mode info.		Commercial Feature					
Name	inch	IR Out	DC Power Out (5V/ 12V)	Ext SPK Out	CLOCK	Pro:Idiom	
LP860H-ZA	42/47/55	O	O	O	X	O	

5.1. External SPK Out

5.1.1. Equipment & Condition

- Jig (Speaker out JIG) or Oscilloscope

5.1.2. Check the speaker out

- Connect the External Speaker : check the sound
Connect oscilloscope, you can see this waveform.

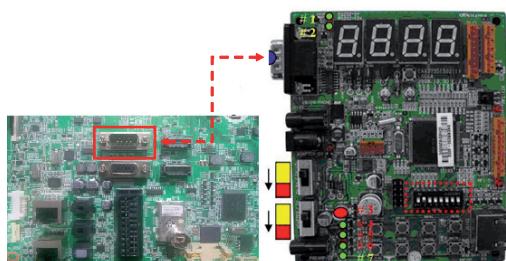

5.2. IR Out and DC Power Outlet (5V/12V)

(1) Equipment & Condition

- Jig (commercial check JIG)
- Special 232C Cable for commercial check Jig
- Power only mode
- PCB mode (instart menu -> menu -> Configuration Setup -> RS232 DC Power Outlet)

(2) Check the power out & IR out - commercial check jig

- Connect each other RS232c port on the Commercial Check JIG
- Press RED Color Button on SVC Remote-control in power only mode (or PCB mode)
- Check the LED of jig board
 - +5 V / +12 V LED (OK condition: Turn On)
 - IR LED (OK condition: blinking)

(3) Check the power out & IR out - mini jig

- Connect mini jig on RS232c port
- Press RED Color Button on SVC Remote control in power only mode (or PCB mode)
- Check the LED of mini jig

(4) Pro:Idiom Check

- Connect the RF Cable
 - Turn to the Pro:Idiom channel (No. 333)
 - Check the video & sound
- ** Only displayed at "POWER ONLY" mode

6. Audio

No.	Item	Min	Typ	Max	Unit	Remark
1.	Audio practical max Output, L/R (Distortion=10% max Output)	9	10	12	W	EQ Off AVL Off Clear Voice Off
			8.10	10.8	Vrms	
2.	Speaker (8 Ω Impedance)	9	10	12	W	

Measurement condition:

- RF input: Mono, 1 KHz sine wave signal, 100 % Modulation
- CVBS, Component: 1 KHz sine wave signal 0.5 Vrms

7. GND and HI-POT Test

7.1. Tool Option selection

- Method: Press Adj. key on the Adj. R/C, then select Tool option.

7.1. Ship-out mode check (In-stop)

- After final inspection, press In-Stop key of the Adj. R/C and check that the unit goes to Stand-by mode.

7.2 GND and Hi-pot auto-check

7.2.1 Method

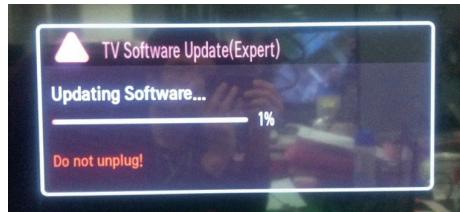

- GND & Hi-pot auto-check preparation
 - Check that Power Cord is fully inserted to the SET. (If loose, re-insert)
- Perform GND & Hi-pot auto-check
 - Unit fully inserted Power cord, Antenna cable and A/V arrive to the auto-check process.
 - Connect D-terminal to AV JACK TESTER
 - Auto CONTROLLER(GWS103-4) ON
 - Perform GND TEST
 - If NG, Buzzer will sound to inform the operator.
 - If OK, changeover to I/P check automatically.
(Remove CORD, A/V form AV JACK BOX)
 - Perform I/P test
 - If NG, Buzzer will sound to inform the operator.
 - If OK, Good lamp will lit up and the stopper will allow the pallet to move on to next process.

7.2.2. Checkpoint

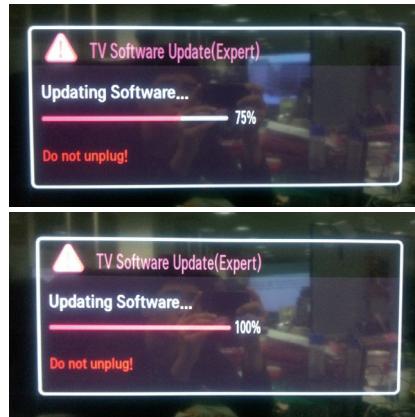

- TEST voltage
 - GND: 1.5 KV / min at 100 mA
 - SIGNAL: 3 KV / min at 100 mA
- TEST time: 1 second
- TEST POINT
 - GND TEST = POWER CORD GND & SIGNAL CABLE METAL GND
 - Hi-pot TEST = POWER CORD GND & LIVE & NEUTRAL
- LEAKAGE CURRENT: At 0.5 mAmps

8. USB S/W Download(Service only)

- Put the USB Stick to the USB socket
- Automatically detecting update file in USB Stick
 - If your downloaded program version in USB Stick is Lower, it didn't work.
- But your downloaded version is Higher, USB data is automatically detecting (Download Version High & Power only mode, Set is automatically Download)
- Show the message "Copying files from memory"

(4) Updating is starting.

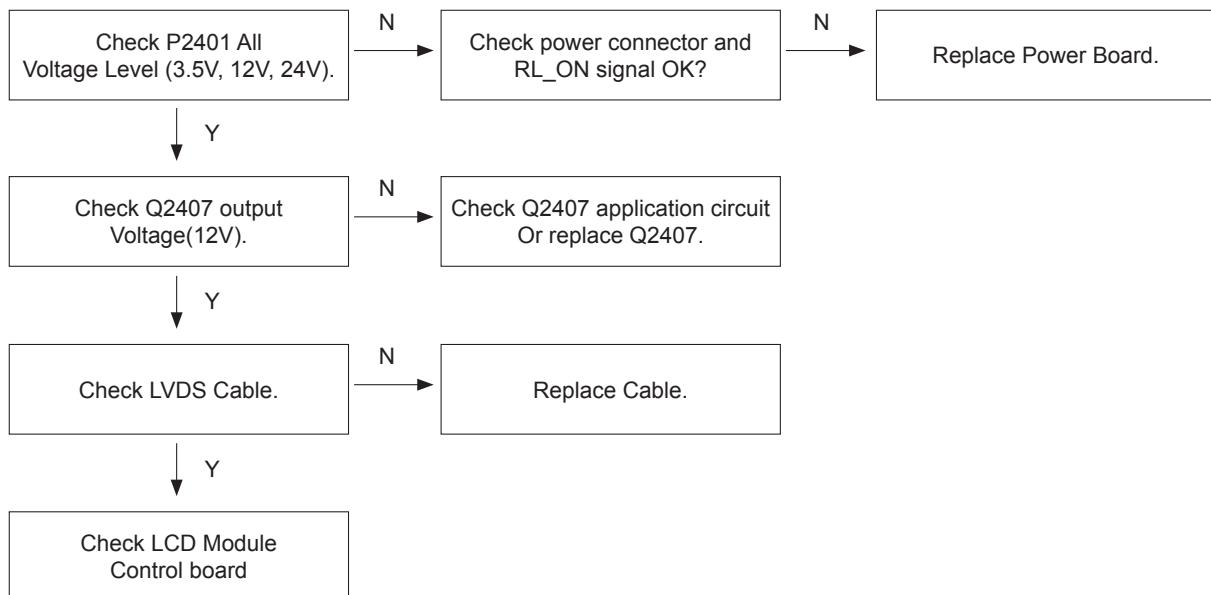

- Updating Completed, The TV will restart automatically.
- If your TV is turned on, check your updated version and Tool option. (explain the Tool option, next stage)
 - If downloading version is more high than your TV have, TV can lost all channel data. In this case, you have to channel recover. if all channel data is cleared, you didn't have a DTV/ATV test on production line.

* After downloading, have to adjust Tool Option again.

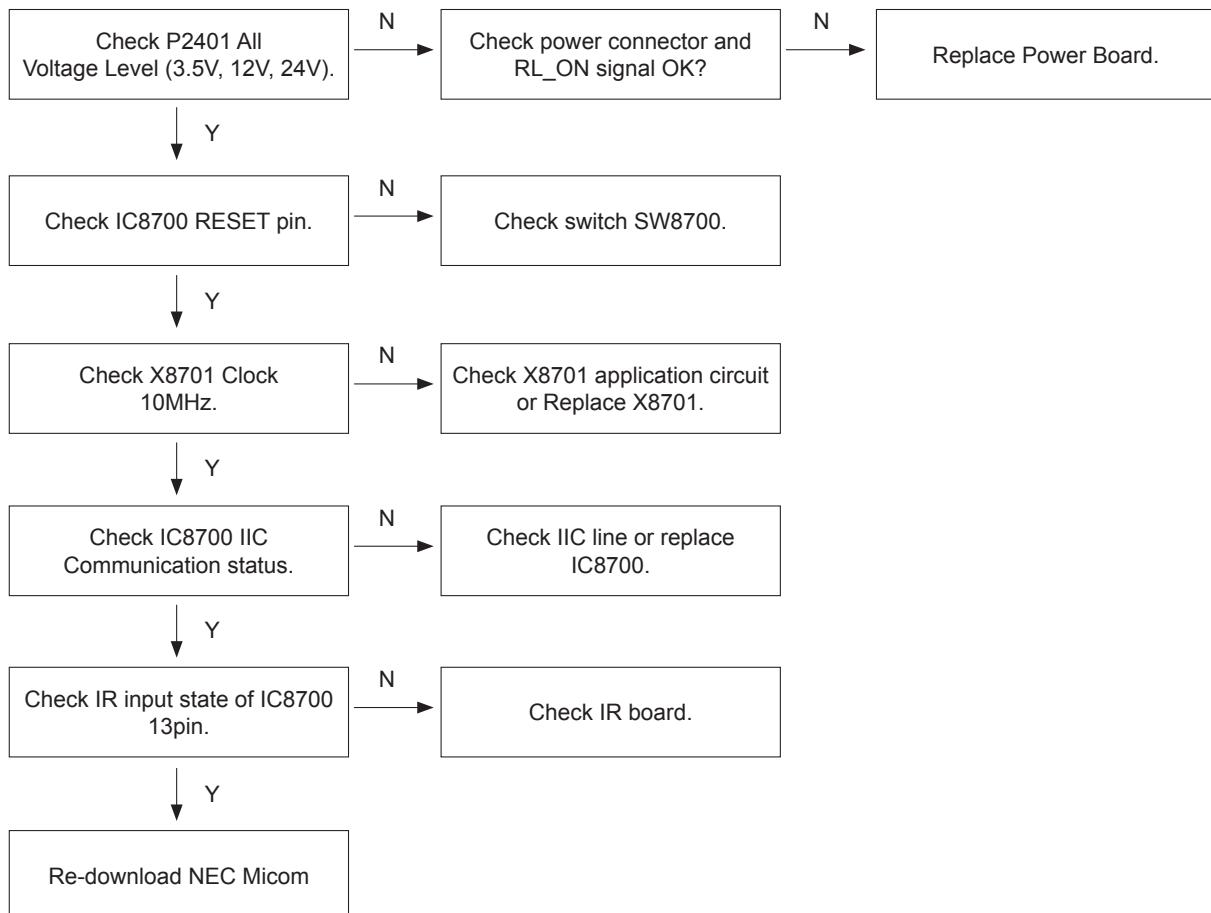

- Push "IN-START" key in service remote control.
- Select "Tool Option 1" and push "OK" key.
- Punch in the number. (Each model has their number)

BLOCK DIAGRAM

EXPLODED VIEW

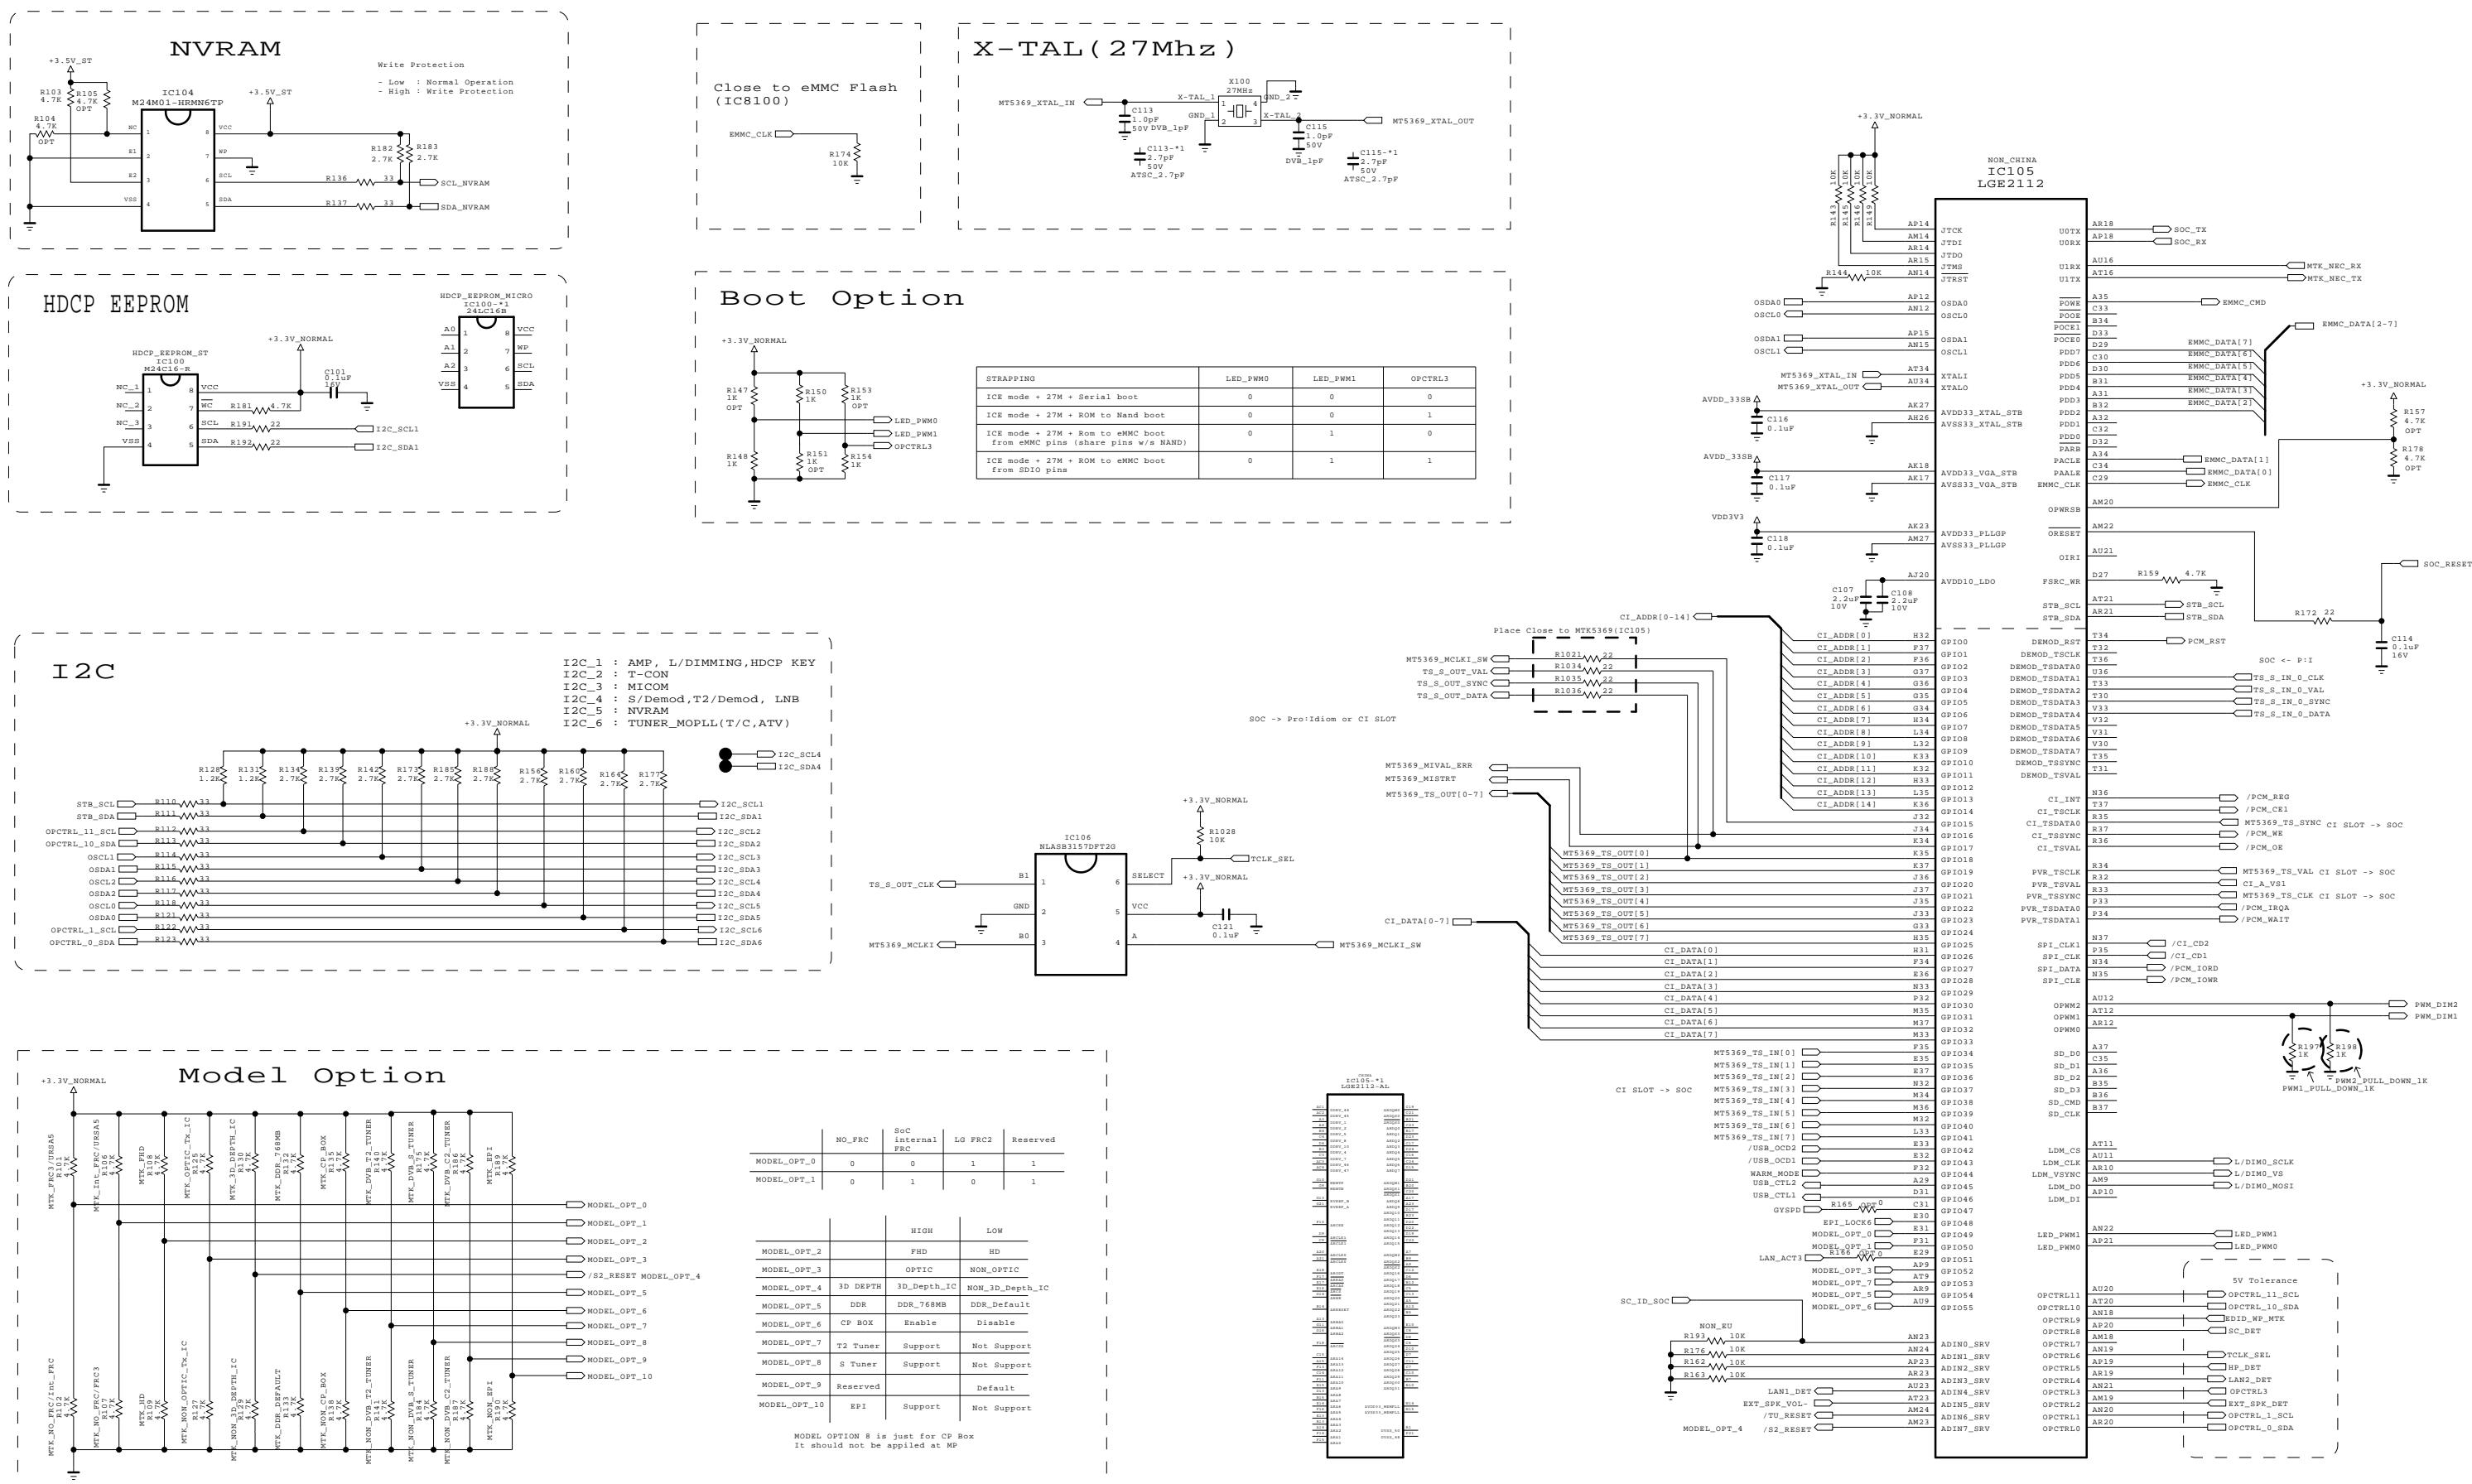

IMPORTANT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety-related characteristics. These parts are identified by \triangle in the Schematic Diagram and EXPLODED VIEW.
It is essential that these special safety parts should be replaced with the same components as recommended in this manual to prevent X-RADIATION, Shock, Fire, or other Hazards.
Do not modify the original design without permission of manufacturer.
